FORE SHOE

Vulcan's Blenkinsop rolled toe horseshoe is an early breakover shoe that follows a pattern introduced to the British Army in the latter half on the 19th Century

The horse's athletic movement is at the centre of this shoe's design. Drawing on solid principles, the Blenkinsop horseshoe moves the fulcrum point of the toe back naturally towards the centre of the hoof and follows normal wear patterns to allow the foot to leave the ground faster than with a conventional toe.
